Dear Hiring Team,

I am writing to apply for the IT Data Analyst role at JOST Australia. As a Computer Science (Data Science) graduate based in Melbourne, I am eager to contribute to building data-driven reporting solutions that support operational and business decision-making.

Through my project-based data science experience, I have developed strong skills in data analysis, SQL, and dashboard development. I have built Power BI dashboards to visualise key metrics and trends, enabling clearer insights and supporting data-driven decisions. I am particularly interested in roles where data is used to improve processes, reporting, and overall business efficiency.

In addition to my analytical skills, I have experience working with structured datasets, performing data transformation, and creating reports tailored to stakeholder needs. I am also actively expanding my knowledge of Microsoft Power Platform tools, including Power Automate and Power Apps, to further strengthen my ability to support business systems and workflows. I am particularly drawn to this opportunity at JOST due to its focus on system integration, process improvement, and supporting internal stakeholders. I enjoy working in collaborative environments and take pride in delivering reliable and practical solutions.

I would welcome the opportunity to contribute to your IT team and continue developing my skills in a business-focused data role.

Thank you for your time and consideration.

Kind regards,
Jashanpreet Singh
